

Stay Safer PRN95+ Protective Face Mask

...unique in its ability to offer a meaningful degree of protection for the wearer

Ordinary fabric face masks act as *barriers* against outbound droplets from potentially infected wearers but they do little to *protect the wearer*. Most are foreign made with unhealthy fabrics and/or toxic materials; are less than 70% effective; and fuel dangerous bioburden build-up.

The **Research Consortium** conducted exhaustive research on COVID-19, its transmission and face mask efficacy which resulted in a 75-page study (click the image to download). Not being able to find a reusable face mask that is intended to provide any meaningful degree of protection for the wearer, we invented it based on our research, and a study jointly conducted by the University of Chicago and the Argonne National Laboratory.

The *Stay Safer PRN95+ Protective Face Mask* leverages science and technology to deliver everything that anyone would want in a face mask. It's an effective source control barrier; an efficient filter against pathogenic microbes; and it inhibits dangerous bioburden build-up and cross contamination. It's extremely comfortable and easy to breathe through for long periods. It can be safely used for 90+ days and therefore represents a genuine value. Its many other features are noted below (click on the graphic to learn even more). For our perspective on the reality of your getting infected, wearer protection, the value of a “company standard” face masks, etc. see our many articles on **Medium** [here](#).

Don't you, your loved ones and employees deserve the very best face mask protection available?

Premium cotton outer layer made with molecularly-bonded QAC antimicrobial

No unsafe synthetic fabrics, metal-based antimicrobials, carbon filters

Fabrics support optimal air-flow, ventilation, breathability

Dual silk chiffon center layers create a tribo-electric filter to attract, secure and kill gram-negative encapsulated microbes

Inhibits dangerous bioburden build-up; cuts risk of wearer, work and home contamination

Nose form for snug fit, tight seal and comfort

Luxurious Supima® cotton inner layer also made with QAC antimicrobial

Adjustable ear straps facilitate snug, tight and comfortable fit

Odorless, latex-free, hypoallergenic and ecofriendly

Safely reusable for 90 days with no need to wash daily
